Labels & Tags

Wood Products Specific Consumables

Purpose built to be applied to wood products, IBC's custom tags & labels provide rugged marking to allow for easy identification and scanning at retail. Designed to stand up to all weather and environments, IBC's tags & labels provide a consistent platform to manage an inventory management or data collection program.

Designed to Label
•Boards •Dimension Lumber •Panels •EWP

Tags and Labels as small as 11/16" x 1-3/8" up to 7" x 22"

At IBC we pride ourselves in consistently providing the best value in tags, labels, and ribbons. Every single tag and label we sell passes an extensive QC procedure and is verified and scanned before being sent to our customers. Using ANSI guidelines, our tags and labels consistently receive A and B+ bar code grades for readability. ANSI tests measure: Edge Determination, Quiet Space, Reflectance, Symbol Contrast, Edge Contrast, Modulation, Defects, and Decodability.

Now with retailer chargebacks costing between 2-10% of manufacturer revenue, properly labeled and readable bar coded products are a financial necessity. Poorly labeled and un-readable bar coded products become a retailer's nightmare when customer transactions are delayed when product bar codes can't be scanned. Sharing the pain, retailers and manufacturers are equally on the hook for ensuring product bar codes are properly applied and readable every time.

Ensure your individual and unit products are properly labeled and bar coded with IBC's wood product tags and labels.
